Datasheet 5962501

10W/m ART LED-Streifen 2700-5000K 5m

Our 10W/m ART STRIPEN 10mm OMNI can also be used directly in the visible range due to its three-sided light emission without recognizable light points. By the homogeneous light distribution without recognizable light points as well as the high-quality, satin polyurethane casting He needs no more cover on the profile. Heat dissipation is already provided by the PU potting and an aluminum or acrylic rail is used for mounting or guiding. The material is insensitive to acids and alkalis, so the strip can be used without hesitation in adverse environments such as swimming pools (chlorine), on ships (salt water) or in kitchens (wipe with detergents). For planned objects there is a possibility to manufacture the feeders according to the requirements on site (IP protection, UV protection, direction of the feed to the back or to the side, length of the feed etc.). ART strips are covered by a 5-year warranty for both function and polyurethane
